

# Presenting Soil Organic Carbon on "Narringa" Hay in the Rangelands Area

## Where:

The Royal Mail Hotel  
Cobb Highway  
Booroorban  
(48km south of Hay)

## When:

Thursday 11 February  
Lunch 12.30  
Presentation 1pm - 3pm

## For further info & RSVP contact:

Sally Ware  
Senior Lands Service Officer  
0429 307 627  
sally.ware@lls.nsw.gov.au  
By Monday February 8

**For interested land managers,  
farmers and stock owners**

**All welcome**

**Do you have an interest in soil  
organic carbon?**

In 2015 Riverina Local Land Services chose six farms to establish a baseline measurement for soil organic carbon. The farms range from the SW Highlands across the Riverina to the Rangelands and represent different farming systems.

The soil carbon story has been sampled, tested and mapped using a methodology developed by **Dr Ischani Wheeler**. Soil organic carbon can be accounted for when changes over time are measurable. This methodology brings science and technology together and your farm one step closer to carbon farming.

## Presentation:

**Peter & Hazel McInerney, 3D-Ag Pty Ltd** share the story of mapping soil organic carbon for **Duncan Fraser's "Narringa", Hay** which represents a farming system of the Rangelands Area. Look at real values measured across the whole property. How does this compare to other localities in the greater Riverina region?

**Ashley Paech**, Farming Systems Project Officer, Holbrook Landcare Network. How carbon trading works and the Emissions Reduction Fund.
